

# Threat Assessments

---

The surge of cyberattacks, conducted by sophisticated online hackers, across companies globally has increased year on year. This increase is due to the rise of complexity and skill level from the attackers, meaning that organisations need to up their game to protect themselves against any threats. Ensuring your organisation is protected against online threat requires analysis and reports not only on your own company's liability but on all of your third parties and suppliers.

## The 3GRC Approach

Our Threat Assessment service leverages the 3GRC Platform to analyse and report on risks associated with an organisation's third parties. The Platform utilises leading risk, financial and active threat intelligence security feeds to assess our clients potential risk based on their third-party suppliers while ensuring they have a good financial reputation and are taking Cyber Security seriously.

3GRC security analysts review the feeds to fully understand the third party risk profile from a number of different aspects including: Financial Risk, Technical Cyber Risk, Threat Intelligence including key personnel Risks and DarkWeb Threats.

3GRC Threat solution starts with the completion of a simple online survey through the 3GRC Platform. This identifies the key information required by our analysts to deliver the components of the 3GRC Threat service.

# 43%

of cyber attacks target small business, while only 14% of small business rate their ability to mitigate cyber risks as 'highly effective'.

---

## The key benefits of 3GRC's Threat Assessments are:

- Identify the risks associated with the on-boarding of a supplier
  - A formal report, with risks populated for any remediation activities
  - Understanding third party risks from a number of different aspects including financial risks, technical cyber risks, threat intelligence (key personnel risks and dark web threats)
  - Cyber Risk assessment of the supplier's internet facing systems to identify any potential security vulnerabilities
-

## Financial

3GRC will perform a Threat assessment against the business/business owners to understand the risks associated regarding the financial state of the on boarding of a supplier. With a clear financial risk scoring report provided, this will ensure that a thorough business review has been conducted to identify any financial risks that may be present.

## Passive Threat Intelligence

Targeted information provided from the 3GRC Threat survey such as company name, domain names, key personnel or customised supplier information is used to perform a passive Threat Intelligence assessment. Identifying threats relating to the supplier by using open source intelligence collected from publicly available sources on the Internet and Darknet.

3GRC's Threat Analysts have access to a large number of Threat Intelligence providers. This includes access to Open Source and commercial Threat Intelligence feeds. The data extracted by our analysts will depend on the target and information supplied and is likely to cover information from recent data breaches or anything which might be of interest collated from dark web sites and forums.

## Active Technical Threat Assessment

Threat will conduct a technical Cyber Risk assessment of the supplier's internet facing systems to identify any potential security vulnerabilities which could cause concern or impact to the on-boarding of that supplier. This can include phishing techniques and traditional penetration testing against applications or infrastructure. This assessment will require the full agreement from the supplier before it can be conducted and will be performed by 3GRC's experienced security consultants and penetration testers.

## Deliverables

The key deliverable for the 3GRC Threat Assessment is the report. The report will provide a clear understanding of any risks based around Financial, Technical Cyber Risk and associated with onboarding a supplier.

## Arrange a demo today

Contact us and we will arrange a convenient time to demonstrate the 3GRC Platform and show you just how easy it can be to manage your third party relationships.
