

## Penetration Testing as a Service (PTaaS)

3GRC offers Penetrating Testing as a Service (PTaaS) to support regular penetration testing programmes. This is achieved through Platform driven tracking and remediation, with added value in the form of regular vulnerability scans. 3GRC provide PTaaS as a flexible consumption of normal penetration testing days in a multiple year term.

### What PTaaS Delivers

#### Platform

3GRC driven Penetration Testing as a Service provides access to the 3GRC Platform throughout the entire engagement, allowing consistent tracking and task management of remediation activities of identified vulnerabilities. Rather than simply working with a paper report of issues, this enhances the process by permitting real time tracking of remediation. The population of vulnerabilities within the 3GRC Platform also permits trend identification of issues found.

Additionally, 3GRC offer Platform licenses which permits further audits and assessments across a wide range of use cases, including third party management and internal compliance reviews.

#### Scoping and Implementation

3GRC offer a consistent scoping process through the Platform's use. All scoping documentation is securely transferred and retained for audit purposes throughout. This process is streamlined to minimise effort, accelerating the time to test.

#### Vulnerability Scanning

To support penetration testing, 3GRC conducts regular external vulnerability scanning to identify emerging issues. Vulnerabilities discovered are uploaded to the 3GRC Platform, providing a single, comprehensive view of risk and threat to the organisation.

### Project vs Programme Penetration Testing

Penetration testing is often treated as a tactical fix to business requirements, rather than scheduled and tracked to ensure it is part of a wider, effective programme. Common challenges include:

- Identified vulnerabilities are not remediated in a timely manner
- Lack in consolidated visibility of test results and common trends
- Limited management information on results
- Inconsistent scoping and scheduling processes

3GRC believe that effective penetration testing programmes work to build frameworks and mechanisms which alleviate these challenges.

Whether the requirements are for applications or infrastructure, 3GRC provides one simple model for consumption utilising our experienced Penetration Testers. Applying context is important to our testing, and therefore over time the PTaaS approach allows consolidation of information into a single view, rather than fragmented paper-based reports.

## Pricing

3GRC is pleased to offer PTaaS in a simple, flexible consumption model based on per annum figures:

PTaaS Model	Number of Penetration Testing Days	Number of 3GRC Platform Entities	Number of Vulnerability Scan IPs	Pricing
PTaaS 10	10	10	10	£9,500
PTaaS 20	20	20	20	£19,000
PTaaS 30	30	30	30	£27,750
PTaaS 50	50	50	50	£45,000
PTaaS 100	100	100	100	£85,000
